Course Syllabus

Department: Physical Education & Integrated Health

Date: February 15, 2013

I. Course Prefix and Number: EMCR 261

   Course Name: Critical Care Emergency Medical Transport-Paramedic - Refresher

   Credit Hours and Contact Hours: 1 credit hour, 1 contact hour

   Catalog Description including pre- and co-requisites:

   The CCEMTP certificate and renewal are valid for three years. Part of this renewal process is to provide documentation of thirty-six (36) credits of continuing education (CE) as the ALS level with an emphasis in critical care. One of the ways to obtain continuing education is to attend the CCEMTP original program offered. Lectures and labs are broken into the following modules: Critical Care Environment, Breathing Management, Surgical Airway Management, Hemodynamic Management, Cardiac Management, Pharmacological Management, GI,GU and Renal Management, Neurological Management, Complications of Transport and Special Considerations. A student could arrange through the EMS Programs Coordinator to attend the various modules to gain the required continuing education credits. The student would receive written documentation as to the modules attended with the appropriate credits. The student only need attend the hours needed for the refresher. Prerequisite: Current CCEMTP certification.

   Relationship to Academic Programs and Curriculum including SUNY Gen Ed designation if applicable:

   Can be used a Physical Education or General Elective

II. Course Student Learning Outcomes: State the student learning outcome(s) for the course (e.g. Student will be able to identify…)

   Describe the history of ambulance/air medical transports.
   Differentiate between routine and specialty equipment found on a Critical Care Transport unit.
   Identify indications for critical care transport.
   Apply the medicolegal aspects of Critical Care Transport
   Interpret laboratory data.
   Define shock, discuss the major pathophysiologies of shock, describe the assessment techniques to help identify shock. Describe the general management for the patient in shock and describe pharmacological intervention in different types of shock.
   Define multisystem organ failure. List the history, signs and symptoms of the patient with sepsis.
   Describe the management of the patient with sepsis.
   Describe the history, signs, symptoms and management of the patient with acute respiratory distress syndrome (ARDS).
   Describe the history, signs, symptoms and management of the patient with disseminated intravascular coagulations (DIC).
Describe the proper infection control procedures that the CCEMTP should take when treating patients.
Assess oxygen saturation using a pulse oximeter.
Assess carbon dioxide levels using an end tidal CO2 detector.
Identify the categories of information obtained through an ABG analysis.
Describe important landmarks and anatomical structures of the chest wall and respiratory system.
Discuss methods and procedures for plural decompression assessment.
Identify transport complications associated with plural decompression.
Identify indications, purpose and assessment for chest tubes. Identify transport complications for chest tubes.
Identify indications, procedures and complications for ET tube and tracheal suctioning.
Identify indications and purpose for portable ventilators. Discuss methods for ventilator assessment and transport complications for portable ventilators.
Identify indications, criteria and purposes for a tracheostomy.
Describe procedures to tracheostomy patients and transport complications.
Identify indications, criteria and purpose for needle and surgical cricothyrotomy. Describe procedures, complications and transport of each.
Discuss and identify indications, purpose, procedures, transport and complications for retrograde intubations.
Discuss between types, assessing, transport and complications of invasive lines.
Identify hemodynamic monitor controls.
Interpret hemodynamic readings and alarm indications along with troubleshooting procedures.
Identify transport complications of hemodynamic monitors.
Identify purposes for invasive hemodynamic monitoring.
Identify the function of each component of a PA catheter.
Identify normal hemodynamic pressures and identify normal pressure waveforms.
Interpret SVO2 monitoring data and discuss appropriate therapeutic modalities to treat abnormal values.
Discuss indications of measuring cardiac output and cardiac index.
Describe problems encountered in measuring PA pressures, state appropriate interventions and describe complications involved.
Identify indications for blood administration, procedures for blood administration.
Identify signs and symptoms of transfusion reactions and management procedures for transfusion reactions.
Describe procedure for administration of whole blood or packed red cells.
Describe the difference between monitoring and assessing a patient using an ECG machine.
Demonstrate proper lead placement and identify wave changes relative to myocardial ischemia, injury and infarction.
Describe possible complications of various infarct locations.
Identify the complications associated with the ICD and location of placement in the chest wall.
Describe the procedures for deactivating an ICD with a magnet.
Understand the basic concepts underlying cardiac pacemaker technology.
Identify indication for IABP. Define the primary physiologic effects achieved by the inflation and deflations of the IABP.
Describe the set up and operation of an IABP.
Identify proper timing and appropriate corrective action as well as transportation complications of IABP.
Identify the indications, mechanism of action, pharmacokinetics, dosing and side effects of the following types of drugs: Sedatives, Analgesics, Paralytics, Antihypertensives, Volume Expanders, Vasopressors, Bronchodilators, Antiarrhythmics, Antianginals, Thrombolytics, Anticoagulants, Antibiotics, and Etomidate.
Identify assessment, indications, contraindications, placement, procedures and transport complications for the following: GI, GU and Renal Assessment, NG and OG Feeding Tubes, Urinary Catheters, Ostomies, Hemodialysis and Peritoneal Dialysis, Rectal Considerations.

2
Describe the major components of a neurological examination. Describe the differences in the neurological assessment between a brain injured or spinal injured patients. Perform a neurological exam. Identify transport considerations for patients with neurological injuries including intracranial pressure and intracranial pressure monitoring. Differentiate operational aspects of critical care transport and conventional prehospital care. Recognize situations warranting diversion or interception. Identify indications, complications and transportation of pediatrics, obstetrical/gynecological, moribund and burn patients.

**College Learning Outcomes Addressed by the Course:** (check each College Learning Outcome addressed by the Student Learning Outcomes)

- [ ] writing
- [ ] computer literacy
- [ ] oral communications
- [ ] ethics/values
- [x] reading
- [ ] citizenship
- [ ] mathematics
- [ ] global concerns
- [ ] critical thinking
- [ ] information resources

**III. Assessment Measures (Summarize how the college and student learning outcomes will be assessed):** *For each identified outcome checked, please provide the specific assessment measure.*

<table>

**IV. Instructional Materials and Methods**

**Types of Course Materials:**

- Text books
- Course Materials disseminated specifically from UMBC (University of Maryland, Baltimore County)
- Labs will be done with various pieces of equipment specific to each specialty area.

**Methods of Instruction (e.g. Lecture, Lab, Seminar …):**

- Lecture and labs will be instructed by physicians, nurses, respiratory therapists, etc. with expert knowledge in each of their respective specialty areas.
V. General Outline of Topics Covered:

Preparatory – Critical Care Environment
   Concepts and Components
   Flight Physiology
   Air Medical Considerations
   Medical Legal Aspects
   Basic Radiographic Interpretation
   Lab Data Interpretation
   Peripheral and Central Vascular Access
   Hemodynamic Monitoring
   Blood Administration

Medical Emergencies
   Respiratory
   Cardiology
      Includes 12 and 15 Lead Interpretation
      Mechanical and circulatory Assist Devices
   Renal and Urology
   Gastrointestinal
   Neurology
   Endocrinology
   Hematology
   Infectious Disease and Control

Airway Management
   Advanced Airways
   Mechanical Ventilation

Trauma
   Trauma Care
   Burn Care

Special Considerations
   High Risk Obstetrics
   Pediatrics
   Child Abuse
   Sepsis and MODS
   Pharmacology Overview
   Pain Management
   Organ Donation and Transplant
