Catalog Description
Introduction to Applied Field Techniques is designed to train students in the use of standard sampling methods and equipment currently used to measure and or assess a variety of terrestrial and aquatic ecosystems. Students will collect and analyze field data using standard protocols and present their results in a variety of ways.

Prerequisites
None

Co-requisites
None

Grading Scheme
Letter

First Year Experience/Capstone Designation

This course DOES NOT satisfy the outcomes applicable for status as a FYE or Capstone.

SUNY General Education

This course is designated as satisfying a requirement in the following SUNY Gen Ed category
None

FLCC Values

Institutional Learning Outcomes Addressed by the Course
Course Learning Outcomes

1. Describe foundational terminology and concepts associated with terrestrial and aquatic ecosystems and sampling.
2. Execute standard ecological sampling procedures.
3. Exercise the steps of scientific method from the initial stages of collecting observations, to building hypotheses.
4. Analyze and report data in standardized format.

Program Affiliation

This course is required as a core program course in the following program
AAS Natural Resources Conservation

Outline of Topics Covered

I. Introduction to map and compass
II. Standard sampling designs
   a. Simple random
   b. Systematic
   c. Stratified
III. Sampling methods for terrestrial environments
   a. Woody and non-woody plant communities
   b. Soils
IV. Sampling methods for wetlands
   a. Delineation of wetland community boundaries
V. Sampling methods for aquatic environments
   a. Ponds and stream communities
