General Information

Date May 18th, 2023
Author Anoop Bhargava
Department Business
Course Prefix ECO
Course Number 211
Course Title Principles of Microeconomics

Course Information

Catalog Description This is an introductory course dealing with the methods and principles of microeconomics and how to better understand economic behavior and economic decision-making. Specifically, students will understand the fundamental concepts of microeconomics dealing with the characteristics of market structures, how business firm prices, costs, and profits are determined. In addition, students will learn how resource prices are established and what the specific roles of government are within the market system.

Course Learning Outcomes

Course Learning Outcomes

1. Evaluate how prices are determined in the goods and labor market and which factors influence and shape these markets.

2. Analyze various concepts of elasticity as they relate to consumers, businesses and government.

3. Compare and contrast the various forms of market structures in a market economy and how these structures affect consumers, companies, and the government.

4. Identify the role of government (local, state, and federal) within the marketplace, and how it positively and negatively impacts market outcomes.

Outline of Topics Covered

I. The nature and method of economics in dealing with consumer and business choices
II. Supply and demand and their determinants
III. Market equilibrium and its problems and solutions
IV. Elasticity of demand, supply, income and cross price
V. Production costs in the short run and long run perspectives
VI. Price, output and profit determination in the various market structures/industries
VII. The demand for economic resources: labor, rent, interest and profits
VIII. Role of government: regulation, antitrust and public goods
IX. Comparative advantage, specialization and trade
