Course Learning Outcomes

Course Learning Outcomes

1. Evaluate scientific methods, psychological approaches and disciplines (e.g., biological, psychodynamic, humanistic), and their contribution to the field.

2. Apply psychology principles from the various approaches and disciplines of psychology to develop critical thinking and interpersonal and social responsibility.

3. Identify and describe historical and contemporary societal factors that shape the development of individual and group identity involving race, socioeconomic status, and gender.

4. Anatomize the role that complex networks of social structures and systems play in the creation and perpetuation of the dynamics of power, privilege, oppression, and opportunity.

5. Students will apply their knowledge of rights, access, and equity to future interactions in a way that benefits social justice action.
