PSY 225 Child Psychology

General Information

Date May 18th, 2023
Author Matthew Holla
Department Social Science
Course Prefix PSY
Course Number 225
Course Title Child Psychology

Course Information

Catalog Description Students will be introduced to the study of child development from conception through age 11. In addition to a biopsychosocial approach, child development will be considered from an ecological perspective that includes the influences of families and institutions on the developing child. Special attention will be given to domains of development such as language and play that are important for understanding how children function in childcare settings. This course will focus primarily on the normal development of the child; however, attention will be directed to some of the more common or particularly problematic disorders of childhood. This course will be especially useful to students who plan to work with children or in settings designed for children.

Credit Hours 3
Lecture Contact Hours 3
Lab Contact Hours 0
